WebMail - brandable & localized	
Server Administration (Web Administration and Command Line)	✓
User Management - classes of accounts with specific, inherited permissions	
Queue & Storage Control	
Comprehensive reports, statistics, logging	
Security policies, multiple AntiVirus & AntiSpam support	✓
Backup & Restore	✓
Automatic Migration	✓
Clustering support - for large scale solutions:	add-on
Delegated Administration; Front-end / back-end servers	
RHCS integration; LDAP authentication & routing	
Technical Support 24x7 & Software Maintenance*	✓

IMPROVED COMMUNICATION & COLLABORATION

- ① Simplify your internal communication process leveraging on AXIGEN's information sharing capabilities; share email folders and contacts, appointments and tasks with co-workers and groups of co-workers.
- ① When out of the office, allow a replacement to read your new messages and send emails in your name
- ① Let your assistant manage your appointments (Calendar) and current tasks; allow him / her to call meetings and confirm availability in your name.
- ① Share information, contacts and tasks between teams in your organization by assigning dedicated public folders.
- ① Manage availability for shared resources through public calendar folders with specific permissions (for example, allow everyone to book time in the conference room but only a dedicated person to cancel such bookings).
- ① Team-mates can check your availability each time before requesting your attendance in a meeting by viewing your free / busy status (without actually accessing your calendar details).

UNMATCHED MANAGEABILITY & CONTROL

- ① Apply differentiated security policies to specific users or groups of users (quotas, restrictions, AntiVirus & AntiSpam - different configurations or even different filtering applications)
- ① Protect sensitive information by selectively enforcing encrypted connections for specific email access protocols, based on the user's location (e.g. SSL for "road warriors", no encryption for local users)
- ① Filter the messages in the queue by resending or deleting (with or without NDR) specific pending messages upon detailed criteria, such as sender, size or retry count.
- ① Prevent users from sending emails accidentally by inserting a delay before message delivery
- ① Seamless upgrade from one major version to another - with minimum downtime

*) Free for one year

The Messaging Solution of Choice for Collaborative Enterprises

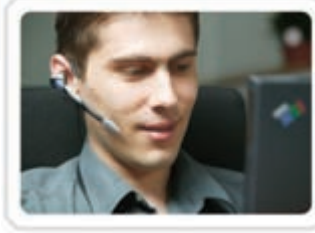

Take advantage of Axigen's advanced groupware features (such as shared folders and permissions or personal organizer), to meet the emerging communication challenges of your collaborative business.

axigen
MAIL SERVER
